

**IN THE CLAIMS:**

1. (Currently Amended) A liquid feed fuel cell system comprising:
  - (A) a direct oxidation fuel cell including a membrane electrode assembly;
  - (B) a source of liquid fuel; and
  - (C) a fuel container coupled with said fuel cell, including:
    - (i) a first inner bladder being substantially fully expanded upon being filled with liquid fuel, and having a fuel outlet conduit to supply liquid fuel to said direct oxidation fuel cell; and
    - (ii) a second inner bladder for receiving effluent from said fuel cell through an effluent inlet leading from said fuel cell into said fuel container, said second inner bladder being disposed directly contacting ~~adjacent to~~ said first inner bladder such that as effluent is received from the fuel cell, the second inner bladder expands and contacts said first inner bladder displacing fuel from said first inner bladder to deliver fuel to said fuel cell, and wherein said second inner bladder is not under application of force.

1    2. (Original) The liquid feed fuel cell system as defined in claim 1 wherein said  
2    second inner bladder is coupled to an anode aspect of said fuel cell.

1    3. (Original) The liquid feed fuel cell system as defined in claim 1 wherein said  
2    second inner bladder is coupled to a cathode aspect of said fuel cell.

1    4.        (Original)     The liquid feed fuel cell system as defined in claim 1, further com-  
2    prising at least one force applying instrument which acts upon said first inner bladder  
3    such that fuel contained in said first inner bladder is expressed through said outlet conduit  
4    toward said fuel cell.

1    5.        (Original)     The liquid feed fuel cell system in claim 1, further comprising at  
2    least one of a pump and a valve means associated with said fuel outlet conduit to control  
3    the delivery of fuel to said fuel cell.

1    6.        (Original)     The liquid feed fuel cell system as defined in claim 1, further com-  
2    prising at least one of a pump and a valve means associated with said effluent inlet con-  
3    duct to control the removal of effluent from said fuel cell.

1    7. – 14. Cancelled
